

Reflection:

Was it hard, easy?

It was hard at first, since the instructions were very specific, and I had to figure out the syntax to get everything to work, but it was fun in the end. In the end it took me around 2-3 hours to get everything done, while including some of the bonuses, specifically 1-4, although number 2 isn't apparent since 3 alters it.

What was the most challenging part of the activity?

The most challenging part was learning the syntax, since I could understand at a glance what was supposed to be done, but the difficult part was always figuring out how to do it. In the end, it's still good practice as it helped me improve my skills in using Javascript, and gave me some ideas for my main webpage later on.

What are the key concepts/skills that you learned from this activity?

I learned how to utilize the timer in Javascript, and make webpages more interactive than simply a default preset setting. I also had to apply critical thinking and analysis in first figuring out exactly what the instructions are telling me to do, and then determining the proper syntax to get it done.
