

## Reflection:

### Was it hard, easy?

This was a really fun activity and a lot easier compared to the others. Once I figured out how to use Javascript to execute commands once the mouse has entered a certain boundary, the rest fell into space.

### What was the most challenging part of the activity?

The most challenging part was the beginning trying to figure out the “mouseenter” and “mouseleave” functions, but once I figured those out, the rest became simple. My practice with the last activity helped me a lot here as I was already familiar with Javascript enough to the point that I could do most of it by heart, but still needed syntax for specific parts.

### What are the key concepts/skills that you learned from this activity?

I checked the CSS and was surprised to see the boundary + boundary syntax used to avoid giving boundaries ID's. Besides that, I learned more about events and how they can be used to give life to dynamic webpages and even make fun little browser games. I hope to get more chances to keep improving my Javascript skills.
